Pietro Fiorentini

Trias

Medium Low Pressure Gas Regulator

Who we are

We are a global organization that specializes in designing and manufacturing technologically advanced solutions for natural gas treatment, transmission and distribution systems.

We are the ideal partner for operators in the Oil & Gas sector, with a business solutions that span the whole natural gas chain.

We are constantly evolving to meet our customers' highest expectations in terms of quality and reliability.

Our aim is to be a step ahead of the competition, with customized technologies and an after-sale service program undertaken with the highest level of professionalism.

Introduction

The **Trias** by Pietro Fiorentini is a **lever-operated** gas pressure regulator controlled by a diaphragm and contrasting regulated spring action.

Mainly used for medium and low pressure natural gas distribution networks, as well as commercial and industrial applications.

It should to be used with previously filtered non-corrosive gases.

According to the European Standard EN 334, it is classified as **Fail Open**.

The Trias is **Hydrogen Ready** for NG-H2 blending.

■ Inlet pressure   ■ Outlet pressure

Figure 2 Trias BM

Features and Calibration ranges

The **Trias** is a **lever-operated** device for medium and low pressure with a unique **dynamic balancing system** which ensures an **outstanding turndown ratio** combined with an extremely **accurate outlet pressure control.**

A balanced pressure regulator it is a pressure regulator where delivery pressure accuracy is not affected by the fluctuation of the inlet pressure and flow during its operation. Therefore, a balanced pressure regulator can have a single orifice for all pressure and flow operating conditions.

This regulator is suitable for use with previously filtered, non-corrosive gases and distribution networks as well as high load industrial applications.

It is a **truly top entry design** which allows an **easy maintenance** of parts directly in the field **without removing the body from the pipework.**
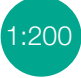

Set point adjustement of the regulator is operated via a spring located in the top chamber.

The Trias pressure regulators incorporates the concept of active regulator plus dual overpressure protection devices in the same body.

- **Trias BM:** active regulator plus incorporated monitor and slam shut.
- **Trias BB:** active regulator plus double incorporated slam shuts.

Features

Features	Values
Design pressure* (PS[1] / DP[2])	up to 1.7 MPa up to 17 barg
Ambient temperature* (TS[1])	from -20 °C to +60 °C from -4 °F to +140 °F
Inlet gas temperature*	from -20 °C to +60 °C from -4 °F to +140 °F
Inlet pressure (MAOP / p_{umax}[1])	from 0.012 to 1.7 MPa from 0.12 to 17 barg
Range of downstream pressure (Wd[1])	from 1.2 to 400 kPa from 12 to 4000 mbarg
Available accessories	none. Pre-defined configurations
Minimum operating differential pressure (Δp_{min}[1])	0.01 MPa 0.1 barg
Accuracy class (AC[1])	up to 5
Lock-up pressure class (SG[1])	up to 20
Nominal size (DN[1,2])	DN 40 | 1" 1/2; DN 50 | 2"
Connections	Class 150 RF according to ASME B16.5 and PN16 according to ISO 7005

([1]) according to EN334 standard
([2]) according to ISO 23555-1 standard
(*) NOTE: Different functional features and/or extended temperature ranges may be available on request. Stated inlet gas temperature range is the maximum for which the equipment's full performance, including accuracy is guaranteed. Product may have a different pressure or temperature ranges according to the version and/or installed accessories.

Table 1 Features

Materials and Approvals

Part	Material
Body	Spheroidal ductile iron GS 400 – 18 ISO 1083
Cover	Die cast alluminium
Seat	Brass
Diaphragm	Rubberized canvas
O-rings	Nitrile rubber
Compression fittings	According to DIN 2353 in zinc-plated carbon steel.

NOTE: The materials indicated above refer to the standard models. Different materials can be provided according to specific needs.

Table 2 Materials

Construction Standards and Approvals

The **Trias** regulators are designed according to the European standard EN 334.
The regulators react in opening (Fail Open) according to EN 334.

The product is certified according to European Directive 2014/68/EU (PED).
Leakage class: bubble tight, better than class VIII according to ANSI/FCI 70-3.

EN 334   PED-CE

Versions

Trias BM

The Trias BM option offer a regulator with an **additional incorporated monitor** regulator. Monitor regulator is an emergency regulator which takes over if, for some reason, the active regulator fails and allows the downstream pressure to increase until it reaches the monitor set-point pressure. This emergency regulator (monitor) is directly assembled to the body of the main regulator.

Both pressure regulators, therefore, use the same valve body but they are controlled by **two independent control mechanism** (control heads, plug and shaft, etc). The operational characteristics of the monitor are the same as the regulator.

Furthermore, as a second level of protection the Trias has a slam shut on board which, in case of both active and monitor fails, close the gas supply within 2 seconds from the overpressure event.

Inlet pressure

Outlet pressure
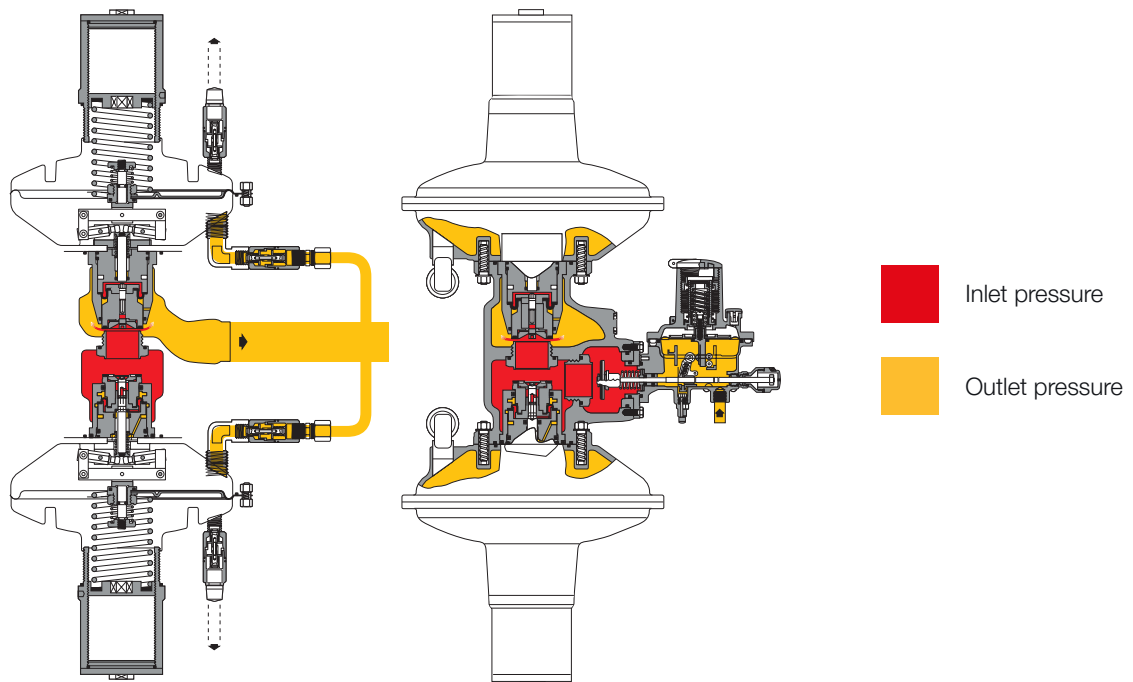

Figure 3 Trias BM with monitor and slam shut

Trias BB

The Trias BB option offer a regulator with a **dual slam shut** for an additional safety layer built in the same body.

Both slam shuts use the same valve body but they are controlled by **two independent control mechanism** (pressure switch, plug and shaft, etc). In case the first slam shut fails, the secondary, usually set slightly higher than the first close the gas supply within 2 seconds from the overpressure event.

Inlet pressure

Outlet pressure
Figure 4 Trias BB with double slam shut

Slam Shut LA

Both Trias versions BM | BB have an **incorporated LA slam shut valve** which is installed during the manufacturing process.

The main characteristics of this device are:

OPSO — Overpressure Shut-Off

UPSO — Underpressure Shut-Off

Internal by-pass

Push button for tripping test

Compact dimensions

Easy maintenance

Sizing and Cg

In general, the choice of a regulator is made based on the calculation of the flow rate determined by the use of formulae using the flow rate coefficients (Cg) and the form factor (K1) as indicated by the EN 334 standard. Sizing is available through the on-line Pietro Fiorentini sizing program.

Flow rate coefficient						
Nominal size	BP	MP	T.195	BP	MP	T.195
Nominal size	40			50		
Inches	1" 1/2			2"		
Cg Trias BB	562	562	562	590	590	590
Cg Trias BM	556	556	556	576	576	576
K1	93.5	93.5	93.5	93.5	93.5	93.5

Table 11 Flow rate coefficient

For sizing **PRESS HERE** or use the QR code:

Note: In case you do not have the proper credentials to access, feel free to contact your closest Pietro Fiorentini representative.

In general the on-line sizing considers multiple variables as the regulator is installed in a system, enabling a better and multiperspective approach to the sizing.

For different gases, and for natural gas with a different relative density other than 0.61 (compared to air), the correction coefficients from the following formula shall be applied.

$$F_c = \sqrt{\frac{175.8}{S \times (273.16 + T)}}$$

S = relative density (refer to Table 12)
T = gas temperature (°C)

$$F_c = \sqrt{\frac{316.44}{S \times (459.67 + T)}}$$

S = relative density (refer to Table 12)
T = gas temperature (°F)

Correction Factor Fc

Gas Type	Relative Density S	Correction Factor Fc
Air	1.00	0.78
Propane	1.53	0.63
Butane	2.00	0.55
Nitrogen	0.97	0.79
Oxygen	1.14	0.73
Carbon Dioxide	1.52	0.63

Note: the table shows the Fc correction factors valid for Gas, calculated at a temperature of 15°C and at the declared relative density.

Table 12 Correction Factor Fc

Flow rate conversion

Stm^3/h x 0.94795 = Nm^3/h

Nm^3/h reference conditions:
T= 0 °C; P= 1 barg | T= 32 °F; P= 14.5 psig
Stm^3/h reference conditions:
T= 15 °C; P= 1 barg | T= 59 °F; P= 14.5 psig

Table 13 Flow rate conversion

CAUTION:

In order to get optimal performance, to avoid premature wear on the regulators components, and to limit noise emissions, it is recommended to check the gas speed and its compliance with local practice and regulations. The gas speed at the outlet flange of the regulator which be calculated by the following formula:

$$V = 345.92 \times \frac{Q}{DN^2} \times \frac{1 - 0.002 \times Pd}{1 + Pd}$$

$$V = 0.0498 \times \frac{Q}{DN^2} \times \frac{14.504 - 0.002 \times Pd}{14.504 + Pd}$$

V = gas speed in m/s
Q = gas flow rate in Stm^3/h
DN = nominal size of regular in mm
Pd = outlet pressure in barg

V = gas speed in ft/s
Q = gas flow rate in Scfh
DN = nominal size of regular in inches
Pd = outlet pressure in psi

Customer Centricity

Customer centricity is a way of running your business — implementing a perfect customer experience at each stage of the pipeline. Pietro Fiorentini is one of the main Italian international company with high focus on product and service quality.

The main strategy is to create a stable, long-term relationship, putting the customer's needs first. Lean management and customer centricity are used to improve and maintain the highest level of customer experience.

Support

Pietro Fiorentini's top priority is to provide support to the client in all phases of project development, during installation, start up and operation. Pietro Fiorentini has developed a highly standardized Intervention-Management-System (IMS), which helps to facilitate the entire process and putting the customer at the forefront of every decision in our process while manufacturing or developing a product to help improve the product and service. With our IMS business model many services are available remotely, avoiding long waiting times, improving service, and avoiding unnecessary expenses.

Training

Pietro Fiorentini offers training services available for both experienced operators and new customers. The training is offered for all levels of our customers which can include one or all of the following: sizing of equipment, application, installation, operation, maintenance and is prepared according to the level of use and the customer's need.

Customer Relation Management (CRM)

The service and care of our customers are one of the main missions and vision of Pietro Fiorentini. For this reason, Pietro Fiorentini has enhanced the customer relation management system. This enables us to track every opportunity and request from our customers into one single information point and allows us to coordinate information allowing us to give the customer improved service.

Sustainability

Here at Pietro Fiorentini, we believe in a world capable of improvement through technology and solutions that can shape a more sustainable future. That is why respect for people, society and the environment form the cornerstones of our strategy.

Our commitment to the world of tomorrow

While in the past we limited ourselves to providing products, systems and services for the oil & gas sector, today we want to broaden our horizons and create technologies and solutions for a digital and sustainable world. We have a particular focus on renewable energy projects to help make the most of our planet's resources and create a future in which the younger generations can grow and prosper.

The time has come to understand how and why we operate now.

Pietro Fiorentini
